PROFILE SUMMARY

Ambitious high school student with a strong foundation in software development and programming. Founder of Rare Developers, a technology startup focused on building innovative digital solutions and scalable software products. Experienced in competitive programming, AI-based projects, and technical volunteering. Highly motivated to pursue international academic opportunities and create real-world impact through technology.

EXPERIENCE

Founder & Software Developer — Rare Developers

- 2026 – Present
- Founded and led a technology startup focused on building modern digital products and web solutions.
- Managed end-to-end product development including system design, UI/UX planning, and deployment workflows.
- Coordinated project execution, technical decision-making, and product optimization.
- Established branding strategy and online presence for the company.

PROJECTS

SafeShare — Secure File Sharing Platform (Founder & Developer)

- Designed and developed a secure, room-based file exchange system with access control and authentication features.
- Implemented privacy-focused architecture incorporating client-side encryption principles.
- Built a modern, minimal user interface optimized for performance and usability.
- Engineered scalable system structure to support multi-user interactions and real-time transfers.

GhuroBD — Tourism Web Platform

- Developed responsive user interfaces for a regional tourism platform focused on user engagement and accessibility.
- Implemented interactive layouts and optimized page performance.
- Collaborated on content structure and navigation flow to improve user experience.
